

Total Protection Roofing System™* for UL 2218, Class 4 Impact-Resistant Shingles

In some parts of the country prone to severe weather, shingles classified for UL 2218, Class 4 impact resistance are available. Our TruDefinition® Duration STORM® and TruDefinition® WeatherGuard® HP Shingles are engineered to meet this rating – one of the industry's highest for impact resistance. These shingles are part of an Owens Corning™ Total Protection Roofing System.™* The Total Protection Roofing System™* depicted below is specially designed to give you the assurance that all your required Owens Corning™ roofing components† are working together to help increase the performance of your roof.

Owens Corning™ Roofing and your contractor have you covered.

When you have an Owens Corning™ Roofing Preferred or Platinum Preferred Contractor install your Total Protection Roofing System,™* you have the opportunity to increase your protection with one of several Owens Corning™ Roofing System Limited Warranties,** which extend the coverage of your roofing components and may even provide workmanship coverage.

To find an Owens Corning™ Roofing Preferred Contractor in your area or to learn more about our Roofing System Limited Warranties** or products, visit www.roofing.owenscorning.com.

* Excludes non-Owens Corning™ roofing products such as flashing, fasteners and wood decking.

† Available regionally; visit www.roofing.owenscorning.com for details.

** See actual warranty for complete details, limitations and requirements.

†† Use of shingle-over ridge vents will affect the impact resistance classification of our WeatherGuard® HP and ProEdge STORM® Hip & Ridge Shingles; use off-ridge ventilation as an alternative. Refer to the installation instructions for complete details.

Total Protection Roofing System™

A system of Owens Corning™ roofing components protecting your home.‡

‡System includes all Owens Corning™ roofing components; excludes non-Owens Corning™ roofing products.*

* Excludes non-Owens Corning™ roofing products such as flashing, fasteners and wood decking.

†† Use of shingle-over ridge vents will affect the impact resistance classification of our WeatherGuard® HP and ProEdge STORM® Hip & Ridge Shingles; use off-ridge ventilation as an alternative. Refer to the installation instructions for complete details.

The Total Protection Roofing System™*

An integrated roofing system, layer by protective layer.

The most important part of the roof? All of them.

It takes more than just shingles to protect your home. It takes an integrated system of components and layers designed to withstand the forces of nature outside while controlling temperature and humidity inside. The Owens Corning™ Total Protection Roofing System™* gives you the assurance that all of your Owens Corning™ roofing components are working together to help increase the performance of your roof – and to enhance the comfort and enjoyment of those who live beneath it.

*Excludes non-Owens Corning™ roofing products such as flashing, fasteners and wood decking.

1 Intake ventilation

When used with the proper exhaust ventilation, Owens Corning™ VentSure® intake ventilation products help replace the warm, humid air in your attic with cool, dry air to help protect the interior components of your roof system from heat and moisture damage. They also help keep the attic temperature closer to the outside temperature to help eliminate problems such as ice damming and premature shingle deterioration.

2 Ice & Water Barrier

Owens Corning™ WeatherLock® Self-Sealing Ice & Water Barrier products are designed to protect the roof where water has a tendency to collect or flow, including valleys, vents, chimneys and skylights. Ice & water barrier products also help prevent damage from ice damming, when melting and refreezing water can migrate beneath the shingles and lead to premature roof deterioration.

3 Underlayment

Underlayment provides an additional layer of protection between your roof's wood decking and the shingles, mainly to guard against wind-driven rain that can get beneath the shingles. Owens Corning™ roofing products include both Fiberglas® Reinforced Felt Underlayment and durable synthetic DECK DEFENSE® High Performance Roofing Underlayment.

4 Starter Shingle Products

Owens Corning™ Starter Shingle products are the first step in the proper installation of the shingles. They help provide a clean look with a straight edge at the eave and along the rake edge of the roof. The continuous sealant bead on the product provides a seal between the starter and the first row of shingles. Owens Corning™ Starter Shingle products help prevent shingle blow-offs and water infiltration in a vulnerable area of the roof.

5 Shingles

Shingles not only serve as the first layer of defense against the forces of nature, they also help define the character of your home. With innovations such as our patented SureNail® Technology and the multiple granule colors and shadowing used in our TruDefinition® Duration® Shingles, Owens Corning™ shingles are designed to bring strength and beauty to your roof.

6 Exhaust ventilation

Owens Corning™ exhaust ventilation components such as VentSure™ ridge or off-ridge vents help draw air out of the attic, protecting the roofing system from heat and moisture damage. Optimally designed to work together with our VentSure® intake ventilation products, they help create a balanced flow where warm, humid air is continuously replaced by cool, dry air.

7 Hip & Ridge Shingles

Owens Corning™ Hip & Ridge Shingles add an attractive, finished look to your roof. They also provide additional protection. Owens Corning™ Roofing offers a variety of styles designed to match and complement our shingles, from the bold look of DecoRidge® Hip & Ridge Shingles† to the clean, smooth lines of our ProEdge™ Series.†
